01

What happened to the earth?

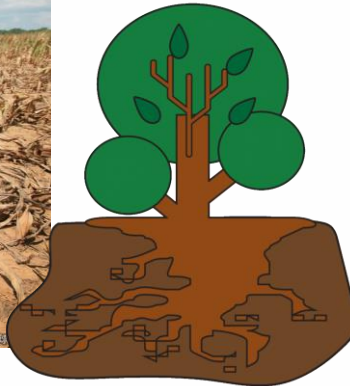

Global Warming

Emissions of carbon monoxide and carbon dioxide will accelerate the melting of ice and snow, affecting the climate.

Global Warming

- Cause the climate change of the environment.
- The mass extinctions of the species.
- Food crises around the world.

What happen to polar bears?

Photos courtesy of google

As the weather getting warmer,
the ice in the Arctic melts,
it's difficult for polar bears to find food
>>Polar bear will die out!

02

Problems in our Hometown

Problems in Taiwan

The extreme weather: a large-scale drought
the extremely heavy rain occurred

Photos courtesy of google

Problems in our hometown

Anping may be submerged by seawater by 2050 due to sea level rise

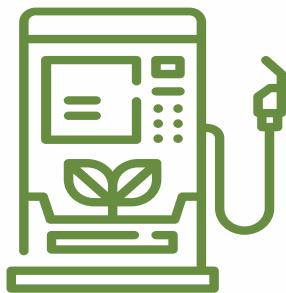

>> **We can build floating city**

03

Solution

3-1 Develop renewable energy

Such as solar energy, wind energy, tidal energy, hydraulic energy, geothermal energy, etc.

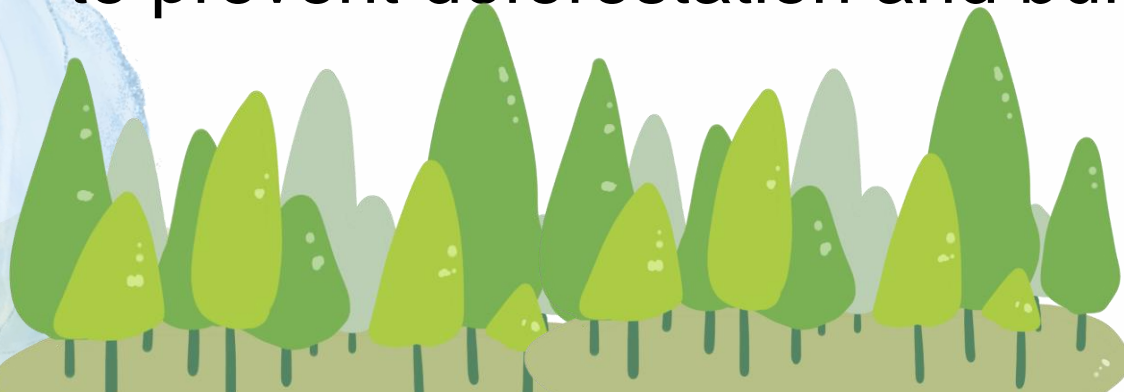

Photos courtesy of google

3-2 Forest preservation

Forests are critical to saving the climate, and governments must create better regulations to prevent deforestation and burning.

3-3 Promote green transportation

Can help to reduce carbon emissions and air pollution.

Photos courtesy of google

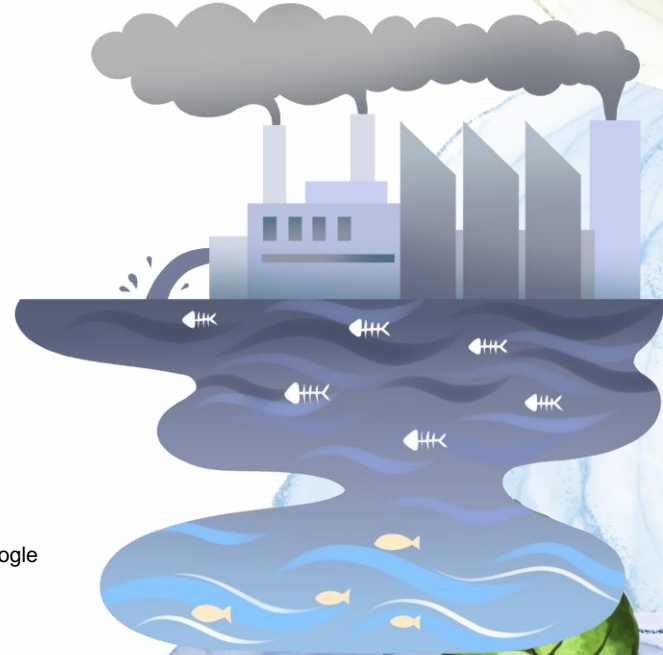

利用大眾運輸通勤

3-4 Protect ocean health

The ocean water cycle, industrial fisheries and plastic pollution damage the marine ecological environment.
