INTRODUCTION

CLIMATE

CHANGE IN

Tainan anping

01

What happen will
climate change do?

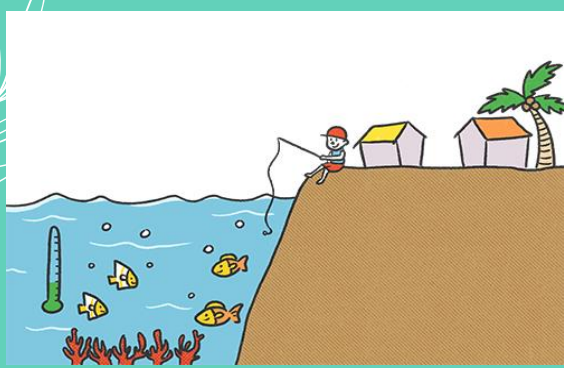

Sunny weather and flooding in Tainan raise concerns about climate change

Changes in weather have caused the Tainan Canal to flood again on sunny days. The entire canal flooded a sidewalk, and the water level was more than 20 cents high, but there was no drop of rain, but it was wet like a typhoon passing through.

Taiwan is vulnerable to climate change. The increasing frequency of extreme weather events and rising sea levels caused by global warming endanger Taiwan's environment and survival. Taiwan's average temperature in the past two years has been the highest in 100 years.

Is smart floating island
feasible?

????????

A PICTURE OF SMART FOLATING ISLAND

25杜苡蓓

WHY DO WE **NEED** TO
LIVE ON THIS ISLAND?

Because of **climate change**,
Not only can we move to **smart floating
island**,
but we can also move to **other
Countries** too.

Although the smart floating island looks beautiful but still dangerous we must prevent some dangerous sea animals....

03

Food Problems on
Floating Islands

How should we get food?

Vegetables can
be grown on
floating islands

Plant food on our
original land and
send it here

How to grow plants?

In the construction of garden projects, there methods for the planting of some aquatic plants and floating islands.

One is to build a plant at the bottom of the pool, plant the floating islands of aquatic plants in the soil .
But each method has its pros and cons.

The second method is generally more commonly used, because the method is easy. For example, when changing soil in spring, adding fertilizer and dividing plants.
