ACTION

What is climate change?

The main cause of climate change is mainly the reduction of human activities.

For the combustion of fossil fuels such as coal, petroleum and natural gas.

What is climate change?

Climate change is primarily caused by greenhouse gases , with anthropogenic emissions of greenhouse gases increasing since the industrial era(around 1750).

The current concentration of carbon dioxide, methane and nitrous oxide in the atmosphere has reached its highest point in the past 800,000 years.

The Impact of Climate Change on Humans and the Environment We Live In

The frequency and intensity of extreme weather (such as floods, droughts and storms) has threaten human health and safety.

As climate change poses an increasing threat to human survival and national security, climate security has become one of the important research topics.

How to deal with climate change?

Carbon emissions are one of the main causes of climate change, so reducing carbon emissions is one of the important measures to deal with climate change.

How to deal with climate change?

1. Take public transportation
2. Use energy-saving appliances
3. Care about climate and energy policies and vote rationally
4. Don't use plastic products
5. Eat less meat and eat more vegetables
