What is "climate change"? Why is it important? Is it essential to hinder climate change?

Human activities have always been climate change major

The driving force is mainly driven by

For the combustion of fossil fuels such as coal, oil and natural gas

What problems will climate change create?

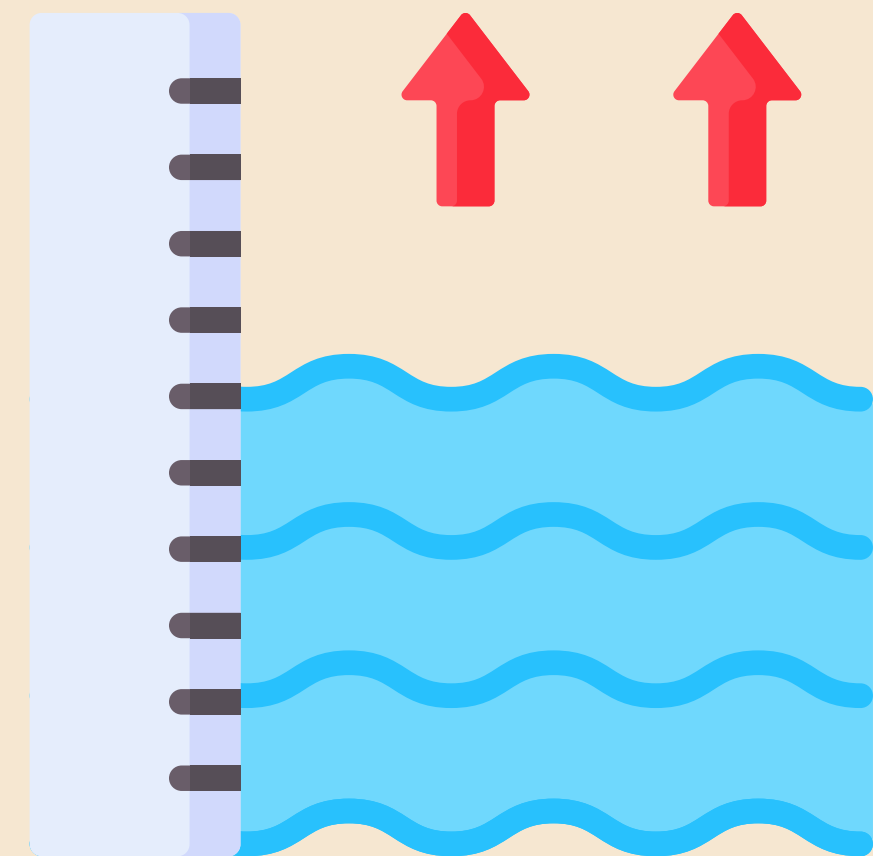

example

- Climate
- Sea-level rise
- Drought
- Flood
- Temperature rise

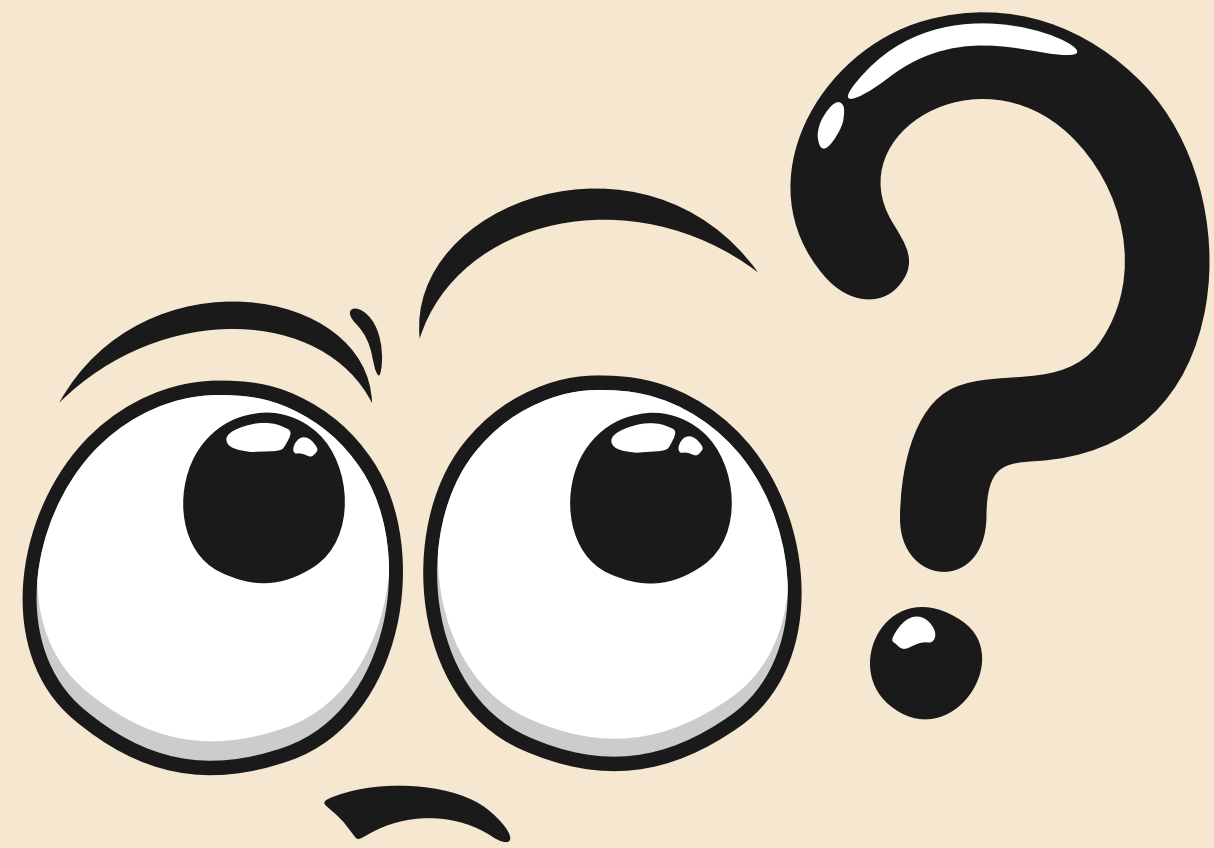

The above factors will cause the earth's

 shortage of food 

How to deal with food shortages?

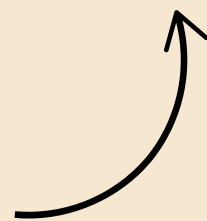

Greenhouse smart planting system

Through the greenhouse smart planting system, high-quality products can be achieved by strictly controlling the planting environment of plant factories and greenhouses. Although agriculture is an important part of society in providing food for its people, many farmers face challenges in running a profitable business due to the difficulty in making clear predictions.
