

What is climate change?

natural factors

SUCH AS VOLCANOES OR SOLAR ACTIVITY

human factors

SUCH AS GREENHOUSE GASES

CARBON DIOXIDE PRODUCED BY FOSSIL
FUELS (SUCH AS COAL AND OIL).

INFLUENCE:

SEA LEVEL RISE

HEALTH IMPACTS

THE PROCESS OF CLIMATE CHANGE

THE INCREASE IN GREENHOUSE GASES IS CAUSING THE EARTH TO BECOME HOTTER.

INCREASE IN EXTREME WEATHER THESE WEATHER CHANGES WILL AFFECT THE GROWTH OF CROPS AND EVEN THREATEN HUMAN LIFE.

EARTH'S TEMPERATURE
BY ABOUT 1°C.

INCREASE IN **EXTREME WEATHER**
THESE WEATHER CHANGES WILL
AFFECT THE GROWTH OF CROPS
AND EVEN THREATEN HUMAN LIFE.

How CAN STUDENTS BE ENCOURAGED TO TAKE ACTION TO COMBAT CLIMATE CHANGE IN THEIR DAILY LIVES?

1. WATCH EDUCATIONAL VIDEOS
2. GREEN ACTIONS

SUCH AS BRINGING YOUR OWN SHOPPING BAGS, REDUCING WATER CONSUMPTION, TURNING OFF LIGHTS, RECYCLING, ETC.

WHAT CAN WE DO ?

1. SAVE ELECTRICITY: TURN OFF LIGHTS AND REDUCE THE USE OF AIR CONDITIONERS.

3. PLANT TREES AND INCREASE GREEN SPACE.

2. REDUCE THE USE OF PLASTIC AND PROMOTE THE USE OF REUSABLE BAGS.

EVERYONE CAN
DO THEIR PART
TO HELP THE
PLANET.

THANK YOU
